Misc. Notes the key to long-term improvement in your health, wellness and ultimately your performance is to improve something every day by 1%. We have discussed this together previously, but what makes this concept so powerful now is the fact that you have a foundation that makes your 1% improvement that much more powerful. The bigger the base of accomplishment, the more momentum you will gain – especially when you are void of injury or illness. Remember that the muscles, tendons, ligaments, and blood chemistry are a result of what you eat and drink over the next six months – the amount of time to completely replace your body. Plan with your eating: purchasing, prepping, and consuming food that is high in vitamins, minerals and clean protein sources for amino acids.

- **Complete Rest Day**

Mental Notes: the benefits of a rest day are larger than your hard workout days; this is because your body doesn't get any stronger or improve regarding your endurance during training. Your body improves physically when you feed it high quality, high quantity food and allow for adequate rest (7-8 hours of evening sleep and if logistically possible, 1-2-hour naps during the day). When your body sleeps deeply, for a long period of time and uninterrupted, your body releases the much-needed human growth hormone (HGH) naturally and you wake up leaner, stronger and have an improved immune system. Please embrace your rest day as if it was one of your harder workout days; your body will appreciate it.

If you have more than a two second deviation, then your average speed need to increase slightly or you need to slow down your initial pace. Remember, the idea is to teach your body what it is like to maintain a consistent pace from the first to last lap. If possible, try to wear your HR monitor to help keep you honest throughout this workout.

Post Workout Protocols

- **2 Hour Nap After Post Ride Meal**

Misc. Notes: the benefit to a nap is the release of hGH (human growth hormone); with this in mind, eat a post ride meal that is high in carbohydrates (this is a natural sleep aid). The goal is to fall asleep as quickly as possible and stay asleep for 2-3 hours (schedule pending) without waking up hungry. If you wake up hungry, then you need to make a note in your food & training journal that what you ate for lunch wasn't enough. Your brain is fed by your liver, if it runs out of sugar, you will be woken up!
